

Python Syntax Quick Reference

A one-page reference for core Python syntax — built for the Python track.

Variables & Data Types

- `name = 'Jane'` → string
- `age = 25` → integer
- `price = 9.99` → float
- `is_active = True` → boolean
- `items = [1, 2, 3]` → list

Conditionals

- if condition:
- `# code`
- elif other_condition:
- `# code`
- else:
- `# code`

Loops

- for item in items:
- `print(item)`
-
- while condition:
- `# code`

Functions

- `def greet(name):`
- `return f'Hello, {name}'`
-
- `result = greet('Jane')`

Common Libraries for Security Scripting

- `requests` — making HTTP requests
- `socket` — low-level networking
- `os / sys` — interacting with the operating system

- argparse — building command-line tools

Reading & Writing Files

- with open('file.txt', 'r') as f:
- contents = f.read()
-
- with open('file.txt', 'w') as f:
- f.write('some text')
